

Environmental Policy

The aim of Atlet AB is to design and produce warehouse trucks with minimum impact on the environment.

With regard to the environmental impact in the life cycle of our warehouse trucks, and considering our environmental objectives, we aim for continual improvement and to take our part of the responsibility for the fulfilment of the Swedish National Environmental Quality Goals.

Long-term we shall strive to be a frontrunner in environmental care, within the warehouse truck industry.

The risk for hazardous environmental impact shall be reduced at an early stage. In product developments and purchase, we will cooperate with and make demands on our suppliers. In decisions, environmental impacts shall be considered along with quality and financial priorities.

Our handling of hazardous chemical substances and waste shall ensure minimum environmental or health impact.

We will follow environmental legal requirements and other legitimate environmental claims from customers and other parties. Environmental work should be characterized by openness towards our employees and other external parties.

It is the management's responsibility to maintain competence and sufficient resources for the fulfilment of the intentions in this policy.
